

CG 3220B2RF

Maturity: **Early-mid**

Fiber Quality:

Characteristics

| | | | |
|-----------------------------------|-------------|-----------------------|-----------|
| Leaf smoothness | Semi-smooth | Maturity | Early-mid |
| Node of the first fruiting branch | 5.9 | Plant height (inches) | 37.5 |
| Storm tolerance | Good | Total nodes | 18.2 |

Insect Resistance Management:

Insect-protected crops are genetically improved to provide in-plant protection against selected insect pests. Beneficial insects are not affected. To preserve the benefits and insect protection of these technology crops, Monsanto Technology LLC, Syngenta Crop Protection and Dow AgroSciences have developed insect resistance management (IRM) guidelines that must be incorporated by everyone purchasing and planting insect-protected crops.

Before opening a bag of seed, be sure to read and understand the stewardship requirements, including applicable refuge requirements for insect resistance management, for the biotechnology traits expressed in the seed set forth in the technology agreement that you sign. By opening and using a bag of seed, you are reaffirming your obligation to comply with those stewardship requirements.

These ratings reflect trends observed in research trials that change with variations in rainfall, temperature, crop production patterns and other factors. Ratings on new varieties are based on limited data and may change as more data is collected.
